

A BUSINESS BUILT FOR YOU

Turn what you already
know into work you can
do from home.

Prepared for Mark Strazisar

25 years of hospitality, finally on your terms.

The business, in one sentence.

You help busy restaurant groups turn what lives in their best people's heads into clear written playbooks, so every location runs the same and every new opening starts from a **proven plan instead of a blank page.**

No cooking. No floor. No clock. Just your knowledge, written down.

What your day actually looks like.

1

Talk

Open Claude and talk for about ten minutes. Explain how a task really gets done, the way you would tell a new manager.

2

Review

Claude writes a clean draft while you talk. You read it and fix anything that is not how you really do it.

3

Save

When it sounds like you, save it. That is one finished, sellable document. You are done for the day if you want.

That is the whole rhythm. Talk, review, save. You stay in charge of every word.

WHY YOU

You have already built the thing you will sell.

- Around 15 concepts built and operated: restaurants, bars, lounges, nightclubs, a coffee shop, a family fun center.
- Owner, Chief Operating Officer, and Vice President of Operations.
- You wrote the training manuals, the safety procedures, and the onboarding programs yourself.
- You took Beta Nightclub to number one in North America and doubled sales at SUTRA Lounge.
- You ran the P&Ls; and mentored the general managers who ran your floors.

Your Documents Business
This is not a new career. It is the work you have always been great at.

The problem every growing group has, and you solve.

Training drifts

A server learns one way at one spot and a different way at another. The brand feels different depending on the door you walk in.

Knowledge walks out

The real playbook lives in your best people's heads. When they leave, it leaves with them.

Every opening from scratch

A group that keeps opening rebuilds training and checklists each time, instead of pulling a proven playbook off the shelf.

Your lane is floor operations. You make the knowledge into documents anyone can use.

What you sell.

Operations core

Opening and closing, cash handling, cleaning, inventory, food safety, emergency procedures, manager checklists.

Employee and training

Onboarding, server and bartender and host manuals, steps of service, menu knowledge, coaching.

Standards and scaling

Brand standards, audits, recipe specs, and the flagship: the new location opening playbook.

Sell one document, a package, or a full system. Sell it once, or keep it current for a monthly fee.

YOUR FLAGSHIP

The new location opening playbook.

Most groups rebuild every opening from a blank page. You give them one proven plan they run every time. A countdown timeline, build sheets, the hiring and training calendar, punch lists, and the soft opening plan.

It turns every opening from a scramble into a routine. **Lead with this.**

What the money looks like.

Per document

\$150 to \$750

Each finished document. Great for starting small.

RECOMMENDED

Monthly retainer

\$3,000 / month

Recommended. A flat fee for the build period, then \$1,000 a month to keep it current. Steady income, protected on slow weeks.

Project fee

\$18k to \$25k

One fixed price for the full system, paid in milestones.

An outside firm would charge this group **\$30,000 to \$75,000 or more** to build the same system. You already know their floors, so you are the better fit and still a bargain.

THE FIRST 30 DAYS

Your first month, one step at a time.

Progress is measured in documents finished, not hours. Rest days are built in.

Built around your life, not the other way around.

-  Work in short bursts. Twenty good minutes moves a document forward.
-  Stack the easy days. Get ahead when you feel strong, rest when you do not.
-  Rest the hard days with no guilt. The work waits. It does not expire.
-  On a retainer, a slow week costs you nothing. You are paid for finished work, not hours.

You already built this. Now you sell it.

Your first move is simple: set up Claude, then read [START-HERE](#).

One finished document at a time, Mark. You have got this.
